Summary

Full-Stack Engineer with a track record of building scalable, real-time systems and IoT solutions. Boosted engagement for 500+ users by architecting Wagwan's Go microservices backend and media pipelines, cutting latency by 85%. Developed a Flutter-based IoT app at Abhiyantrik Solutions, enabling reliable MQTT device control. Skilled in distributed backend design, AI integration, PostgreSQL optimization, and cloud-native deployments. Passionate about creating resilient systems that seamlessly connect mobile, backend, and smart devices.

Education

KLE Technological University

Bachelor of Engineering in Electronics and Communication (GPA: 8.79)

Hubli, Karnataka

2020 – 2024

Experience

Wagwan World

Part-Time Full Stack Developer

Bangalore (Contract-Remote), Karnataka

Feb 2024 – Present

- Owned the end-to-end development of the entire backend infrastructure using Go and gRPC, building a scalable and resilient platform for a real-time social application.
- Designed and implemented asynchronous media processing pipelines reducing user-upload latency by 85%

Abhiyantrik Solutions Pvt. Limited

Full Stack Developer

Hubli, Karnataka

Jan 2024 – July 2025

- Spearheading the development of a smart home automation mobile application for Abhiyantrik Smart Switches using Flutter and MQTT protocol for real-time device communication.
- Contributing across the full product lifecycle — from mobile UI/UX implementation to back-end API design and device integration workflows..

Samsung SEED

Student Intern

Hubli, Karnataka

May 2022 – Jun 2023

- Developed a desktop application for image annotation using Python and Tkinter.
- Utilized Deep Learning models to automate mask generation, enhancing annotation accuracy.

Centre of Excellence in Visual Intelligence (CEVI)

Project Trainee (Research Experience for Undergraduates - REU)

Hubli, Karnataka

Jun 2023 – May 2024

- Contributed to research on Point Cloud processing using Deep Learning, developing techniques for efficient 3D data upsampling. This work demonstrates a capacity for learning quickly and tackling complex data challenges.

Projects

M.R White(Undecover Clone) | *Flutter*

Jun 2025

- Designed and developed a mobile clone of the popular social deduction game “Undercover”, where players identify the impostors among them: Undercover and Mr.White.
- Implemented core game logic, player role assignments, voting mechanics, and multiplayer session management.

Mesh Generation on Point Cloud | *Python, PyTorch, C++, Unity3D*

Nov 2023

- Developed and implemented Deep Learning models for constructing 3D meshes from refined point cloud data.
- Integrated generated meshes into Unity3D as game objects for gamification of point cloud visualizations.

Semi-Automatic Annotation Tool | *Python, Tkinter, Deep Learning*

May 2023

- Created a Graphical User Interface (GUI) for efficient image annotation.
- Integrated Deep Learning models to automate mask generation, significantly improving annotation speed and accuracy.
- Applied Transfer Learning techniques to enhance the model's performance for automatic annotation tasks.

Custom Database in GoLang | *Go, DBMS Principles*

Oct 2021

- Engineered a custom key-value database from scratch using GoLang.
- Implemented core CRUD (Create, Read, Update, Delete) functionalities and basic indexing.

Technical Skills

Languages: C, C++, Python, Go, Protocol Buffers (Protobuf), Dart, HTML, CSS, SQL

Developer Tools: CLion, VS Code, PyCharm, Eclipse, Google Colaboratory, Git, GitHub

Technologies/Frameworks: Flutter, Linux, PyTorch, gRPC, Tkinter, Unity3D, Deep Learning

Concepts: System Design, Microservices, Data Structures, Algorithms, Concurrency, Database Design
